EDUCATION

University of Waterloo

Bachelor of Computer Science, Co-op

Waterloo, ON

GPA: 3.7/4.0

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Java, C, C#, HTML, CSS, SQL

Frameworks: React, React Native, Next.js, Angular, .NET, Node.js, .NET, Tailwind CSS, Expo, MongoDB, PostgreSQL, MySQL, Supabase, OAuth

Cloud & Developer Tools: AWS, Google Cloud Platform, SSMS, Git, Linux, Postman

Certifications: AWS AI Practitioner - Issued 2025 (Machine Learning, AWS AI/ML Services, Cloud Computing)

EXPERIENCE

Full Stack Developer

May 2026 - Present

Ontario Power Generation - Digital & Technology Services

Typescript, Angular, React, C#, Python, Java, .NET, SQL

- Delivered **10+** production features for Project Workbench, an enterprise application managing **10,000+** work orders, leveraging **React**, **TypeScript**, **.NET**, and **SQL** Server to improve operational efficiency by **30%** across OPG.
- Reduced query execution time by **20%** by optimizing **10 SQL** queries and indexing strategies, improving application responsiveness and accelerating retrieval of work order and project metadata.

Frontend Developer

Jan 2026 - Mar 2026

Accelerate Alberta |  GitHub |  Live

React, Next.js, TypeScript, Resend

- Engineered a scalable lead generation pipeline with validated forms, API routes, and automated email delivery through **Resend**, achieving **100%** submission reliability and improving conversion through optimized UX and CTAs
- Architected and launched an optimized marketing website using **Next.js**, **React**, and **Tailwind CSS**, designing reusable components and improving layout structure to reduce UI latency and improve interaction speed by **20%**

Software Developer

Oct 2025 - Dec 2025

UW Electrium Mobility - Request Platform Website |  GitHub

Next.js, TypeScript, SupaBase, PostgreSQL, NextAuth

- Developed and optimized reusable UI components in **Next.js** and **TypeScript**, improving frontend maintainability and reducing unnecessary re-renders by **25%** through refactored component structure and state management.
- Integrated **Supabase (PostgreSQL)** CRUD operations into the application's data layer, improving backend-frontend data synchronization and consistency by **20%**.

PROJECTS

CityWatch - HackCanada 2026 Hackathon | GitHub

React Native, TypeScript, Expo, Node.js, MySQL, Gemini API

- Led a team of **4** to build a cross-platform **React Native** mobile app enabling crowdsourced reporting of infrastructure damage, integrating **Mapbox** APIs to visualize risk across **100+** geospatial grid cells in real time.
- Designed a geospatial data pipeline using **Supabase**, **PostgreSQL** and **PostGIS** to process and aggregate **50,000+** infrastructure reports, enabling dynamic heatmap generation and spatial queries for identifying high-risk zones.
- Engineered a multi-service backend using **Node.js**, **Express** and **FastAPI**, orchestrating **3** external APIs (**Mapbox**, **OpenWeatherMap**, **Gemini**) to enrich reports and deliver real-time analytics with reduced processing latency.

NutriLens - Technova 2025 Hackathon | GitHub

React Native, TypeScript, Expo, Node.js, MySQL, Gemini API

- Led 4 developers to build a **React Native** app in **TypeScript** with **Expo's barcode scanner** to scan packaged foods and fetch nutrition details from OpenFoodFacts, Nutritionix, and USDA databases.
- Implemented a health-condition filter that flags scanned foods conflicting with user dietary or medical restrictions, achieving **90%** accuracy.

MailGest | GitHub | Live

React, JavaScript, Node.js, MongoDB, Gemini API, OAuth

- Engineered a full-stack LLM-powered email summarization platform that surfaces high-priority messages and reduces time spent scanning large inboxes by **50%**.
- Designed an end-to-end data pipeline that authenticates users via **Google OAuth** and transforms email metadata into structured inputs for **Gemini AI** summarization.
- Implemented session-aware **REST APIs** that cache AI-generated email summaries per user, reducing recomputation by **20%** and API costs by **30%**.
